Repeatability Test

Young-Kyoon Suh

September 9, 2017

1 Description

This document characterizes execution times measured on a simple program in pure-computation mode, called *INC*, with increasing task lengths (up to 16,384 seconds from 1 second). For the characterization, we present various histograms of INC throughout this document. The main goal of examining these histograms is to make sure if two (or more) histograms of INC with the same task length have the same shape or not. If that's the case, then we can say that such an INC run is so called *repeatable*; in other words, *repeatability* is satisfied in our experimental settings. Another goal is to uncover and explicate several interesting structures behind the histograms. The third goal is to build a statistical distribution (or model) fitting in the histograms, so that later we are capable of predicting a concrete execution time via the model on an arbitrary algorithm with a given input on a real execution environment.

In our experiments, we used EMPv5 [1]. (That said, the second step of EMPv5 was on purpose omitted, just to obtain better histograms by retaining more samples.) In the protocol, we use taskstats C struct to get measures of a captured process. The taskstat's data is delivered via a netlink socket from the kernel space. The receive buffer for the socket is not robust for many observed processes [2]. Fortunately, there is an average of 95 processes per iteration of a run, which turns out to be fine with the struct. For a much more number of processes, the use of `/proc/`[pid]`/stat` is preferred, as (i) there are equivalent measures available in the `/proc` filesystem, and (ii) there's little constraint on the use as opposed to taskstats.

Now we show histograms of elapsed time (ET) and process time (PT) of INC via the EMPv5 protocol.

2 Histograms on the First Run

This section exhibits histograms on the first run of INC with its task length increasing from 1 second to 4096 seconds. The detailed description of the base data is from Table 1.

Experiment Notes: Table 1 provides a short description of our experimental runs, on which the following histograms are based.

Machine	Task Length (sec)	Description	Experiment Period	Relevant Histograms
`sodb9`	INC1∼INC64	1000 samples, each	2017-03-02 ∼ 2017-03-04	Figs. 1, 2, 5, and 6
`sodb9`	INC128∼INC1024	300 samples, each	2017-03-04 ∼ 2017-03-11	Figs. 3 and 7
`sodb10`	INC2048	300 samples	2017-03-02 ∼ 2017-03-09	Figs. 4(a) and 8(a)
`sodb12`	INC4096	300 samples	2017-02-13 ∼ 2017-02-27	Figs. 4(b) and 8(b)

2.3 Additional Histograms

This section exhibits the histograms of INC with some intermediate task lengths under 256 secs. These histograms are intended to investigate where the crossing and merge of two peaks that are consistently observed up to INC128 happened. Table 2 provides a description of the intermediate runs.

Machine	Task Length (sec)	Description	Experiment Period	Relevant Histograms
`sodb9`	INC96∼INC256	1000 samples, each	2017-05-24 ∼ 2017-06-06	Figs. 17, 20(d), and 21(a)
	INC3, 6, 12, 24, 48, 72, 80, 88, 104, 112, and 120	1000 samples, each	2017-06-07 ∼ 2017-06-16	Figs. 15(c), 16(a), 16(c), 17(a), 17(c), 18(a), 18(b), 18(c), 19(a), 19(b), and 19(d)

2.4 Summary

Stacked Histograms in a 3D Plot: Figure 13 represents a 3D plot of collecting the histograms of PT exhibited in Section 2. Note that the histograms from the task lengths of 8192 and 16384 seconds to be shown in Figures 36(c) and 36(d). are brought into Figure 13 for completeness. The x-, y-, z-axes indicate the normalized PT ranging from 0 to 100, task length in log scale, and relative frequency of each histogram, such that for each INC it is scaled from 0 (the shortest) to 100 (the highest).

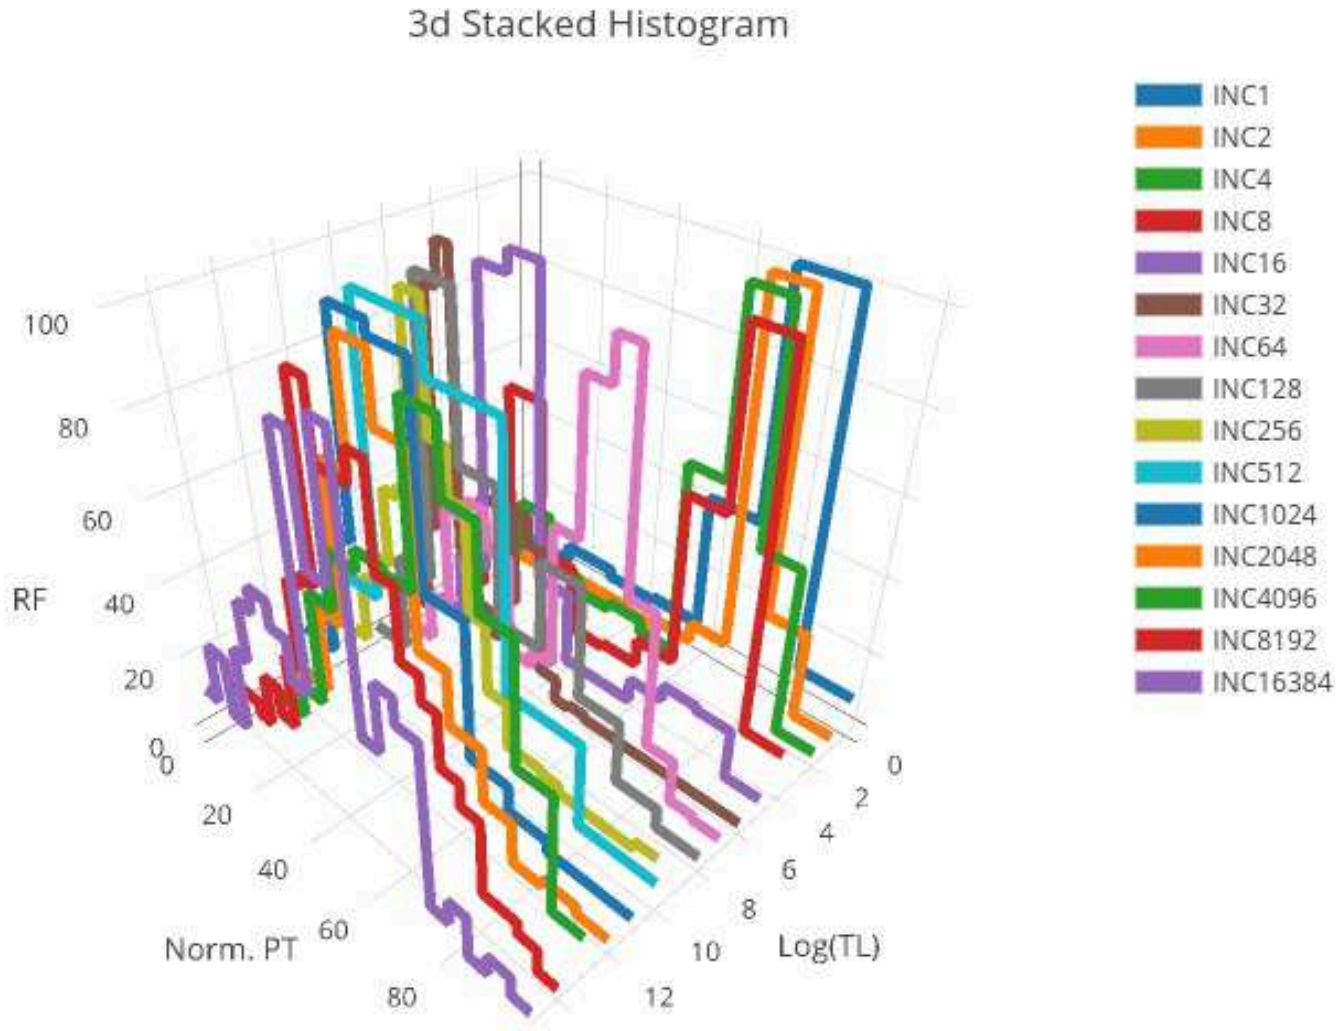

Figure 13: 3D histograms on INC

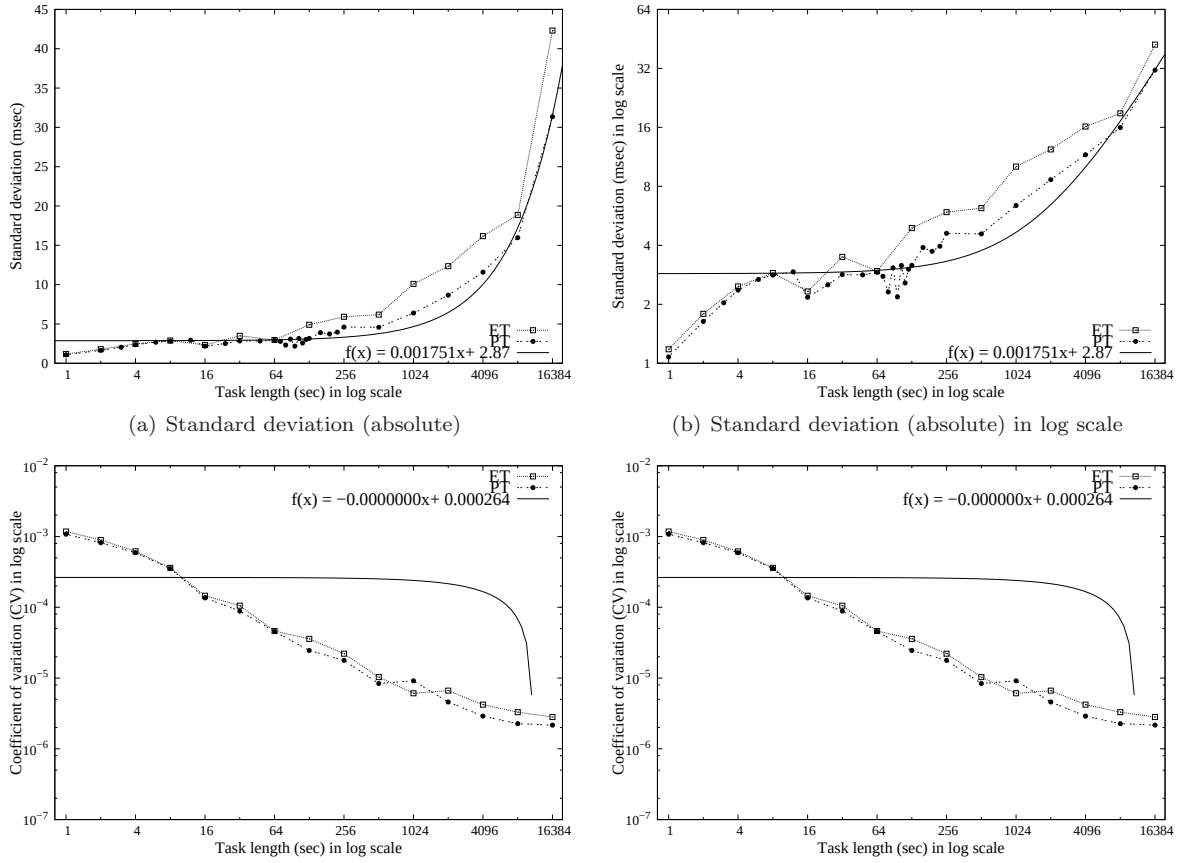
Absolute and Relative Variance over Increasing Task Lengths: Figure 14 exhibits absolute and relative variances over increasing task lengths. More specifically, Figures 14(a) and 14(b) concern the PT standard deviations of all the runs including those two longest runs of INC8192 and INC16384 described in Table 11. The x-axis is task length, and the y-axis standard deviation; Figure 14(b) is taken in log scale. Figures 14(c) and 14(d) shows the relative variance of the same data set—*coefficient of variation* (= standard deviation / task length (or mean)). Both of the x and y axes in these two figures are taken in log scale. We also overlap a linear-square-fit of each case on the same figure.



(a) Standard deviation (absolute)

(b) Standard deviation (absolute) in log scale

(c) Coefficient of variation in log scale (relative): divisor=mean

(d) Coefficient of variation in log scale (relative): divisor=task length

2.5.3 Correlational Analysis on Selected Runs

In this section we perform correlational analysis between the user and system time of INC2048 and INC4096 runs and selected measures of the daemons captured on the two runs.

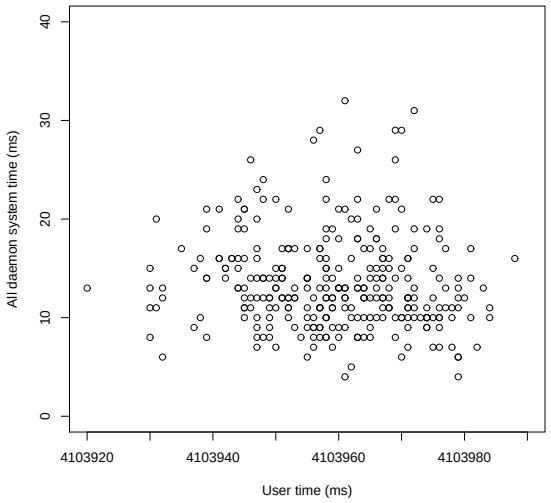
	INC2048's u time	INC2048's s time
INC2048's u time	-	0.05
daemon u time	0.56	0.61
daemon s time	0.48	0.57
daemon minor faults	0.53	0.62
daemon major faults	0.55	0.59
daemon read bytes	0.55	0.59
daemon read char	0.56	0.61
daemon read sys calls	0.57	0.63
daemon write bytes	0.57	0.64
daemon write char	0.53	0.62

Table 3: Correlation of user and system time of INC2048 with some daemon measures

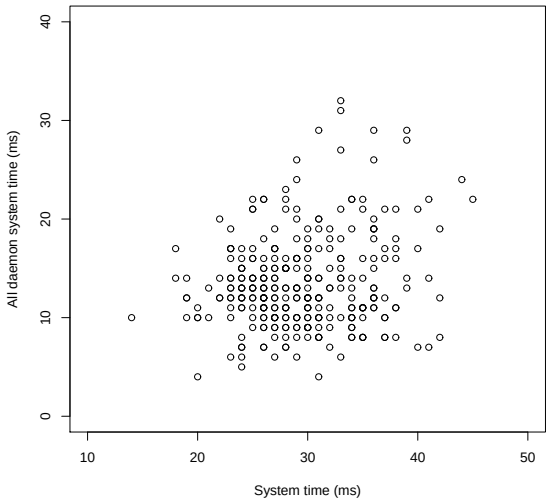
	INC4096's u time	INC4096's s time
INC4096's u time	-	-0.30
daemon u time	0.1	**0.3**
daemon s time	-0.09	**0.19**
daemon minor faults	**0.11**	**0.32**
daemon read char	0.1	**0.32**
daemon read sys calls	0.11	**0.32**
daemon write bytes	0	**0.26**
daemon write char	0.11	**0.32**

Table 4: Correlation of user and system time of INC4096 with some daemon measures

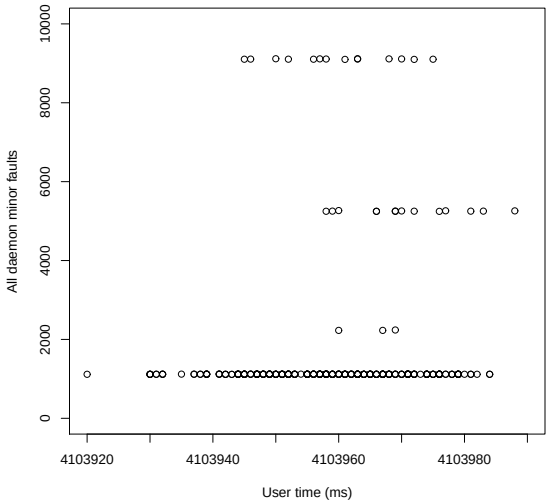
Scatter Plots on Some Significant Correlations: The following scatter plots correspond to the correlations bold in Table 4.



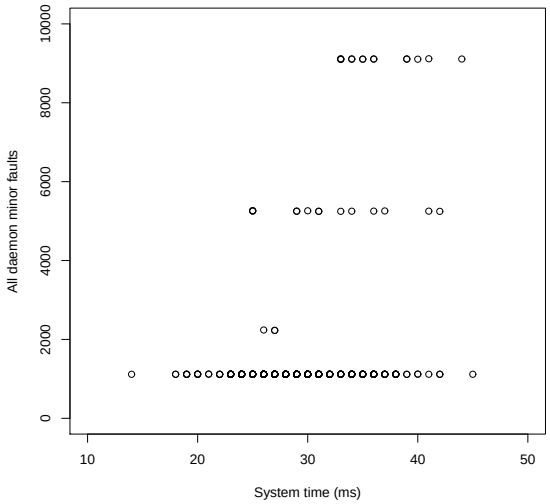
(a) User time vs. Sum of all daemon system time



(b) System time vs. Sum of all daemon system time

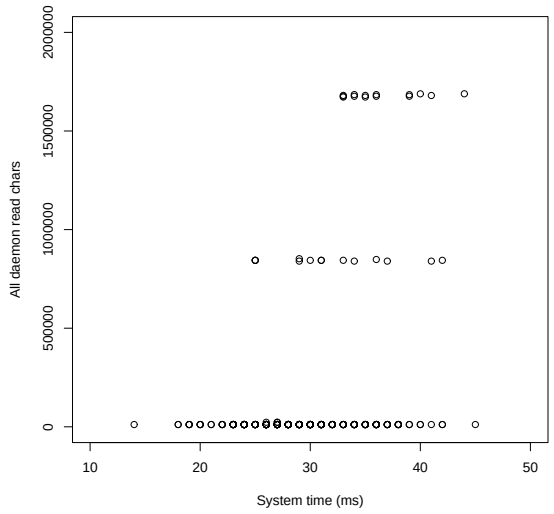


(c) User time vs. Sum of all daemon minor faults

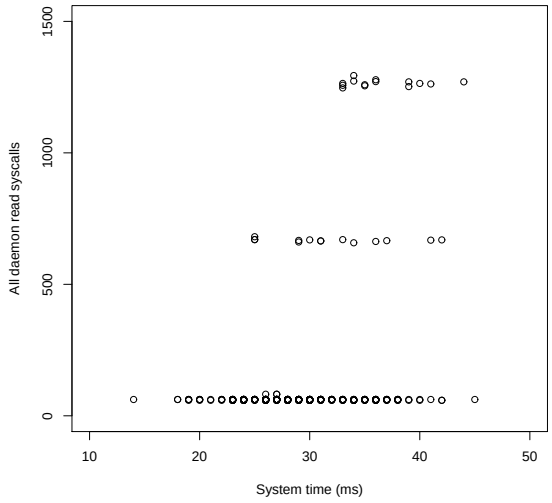


(d) System time vs. Sum of all daemon minor faults

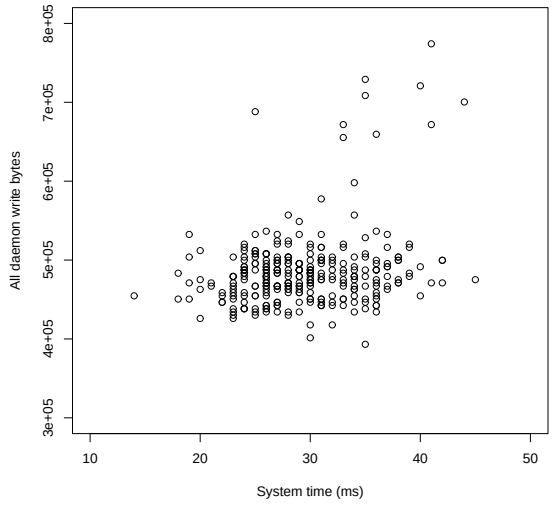
Figure 27: Scatter plots between measures on INC4096



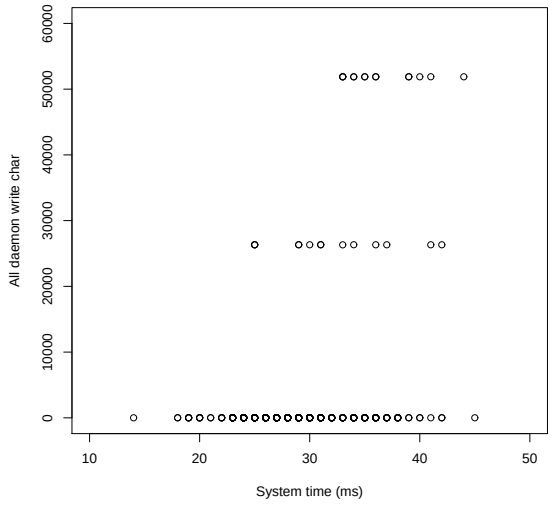
(a) System time vs. Sum of all daemon read char



(b) System time vs. Sum of all daemon read syscalls



(c) System time vs. Sum of all daemon write bytes



(d) System time vs. Sum of all daemon write char

Figure 28: Scatter plots between measures on INC4096

Detailed Measures on Some Significant Samples: The following tables show the breakdown of measures of processes observed on some distinct samples (leftmost or rightmost) in the selected runs.

proc name (id)	u time	s time	min flt	maj flt	r bytes	r char	r sysc	w bytes	w char	w sysc

3 Histograms on the Second Run

This section exhibits histograms on the second run of INC with its task length increasing from 1 second to 4096 seconds, via EMPv5 without Step 2. The detailed description of the base data is from Table 11.

Machine	Task Length (sec)	Description	Experiment Period	Relevant Histograms
`sodb9`	INC1∼INC64	1000 samples, each	2017-03-13 ∼ 2017-03-14	Figs. 29, 30, 33, and 34
`sodb9`	INC512∼INC1024	300 samples, each	2017-03-17 ∼ 2017-03-21	Figs. 31 and 35
`sodb10`	INC2048	300 samples	2017-03-13 ∼ 2017-03-20	Figs. 32(a) and 36(a)
`sodb12`	INC4096	300 samples	2017-03-02 ∼ 2017-03-17	Figs. 32(b) and 36(b)
`sodb10`	INC8192	261 samples	2017-04-27 ∼ 2017-05-21	Figs. 32(c) and 36(c)
`sodb12`	INC16384	130 samples	2017-04-27 ∼ 2017-05-21	Figs. 32(d) and 36(d)

Table 11: Notes on experiment runs used for histograms

INC8192/INC16384 unfortunately stopped in the middle of their runs due to a frozen vnc problem. So couldn't finish 300 samples.

3.2.1 Analysis

In this section we look into what happened inside the peaks observed in a certain histogram. We consider Figure 33(d) for this study. In the figure, we see the peaks at 8015 msec, 8020 msec, and 8021 msec.

Table 12 shows captured daemons and their runtime statistics per bin of figure. Note that bin is at the unit of PT. It appears that the peaks are definitely correlated with (1) appearances of some daemons and (2) times that those daemons co-ran with INC8.

TASK_LEN	BIN (PT)	DAEMON	MIN_PT	MAX_PT	AVG_PT	STD_PT	Counts
INC8	8013	jbd2/md0-8	1	1	1	0	1

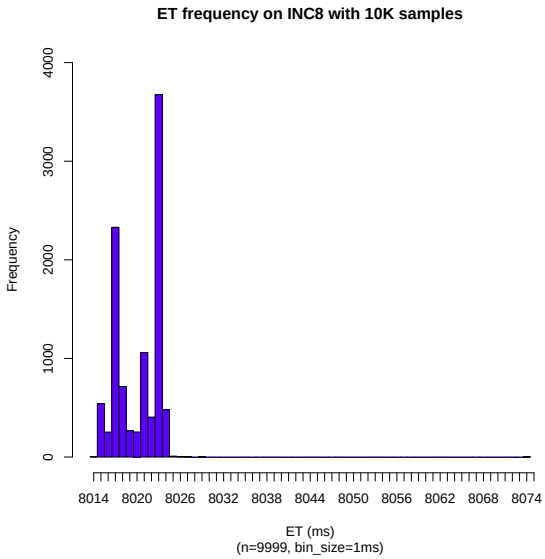
Table 12: Daemons observed from the INC8 run

4 Histograms with 10,000 samples

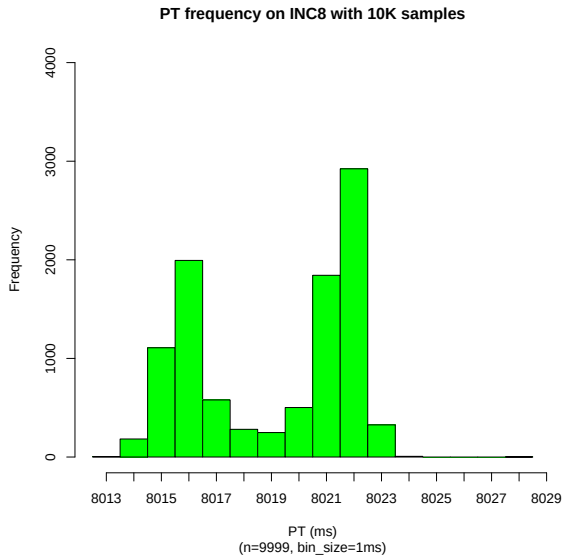
This section exhibits histograms on two runs of INC, each with 8 and 16 seconds as its task length, having 10,000 repetitions. The detailed description of the base data is from Table 13.

Machine	Task Length (sec)	Description	Experiment Period	Relevant Histograms
`sodb9`	INC8	10000 samples	2017-03-29 ∼ 2017-03-30	Figs. 37(a) and 37(b)
`sodb10`	INC16	10000 samples	2017-03-29 ∼ 2017-03-31	Figs. 37(c) and 37(d)

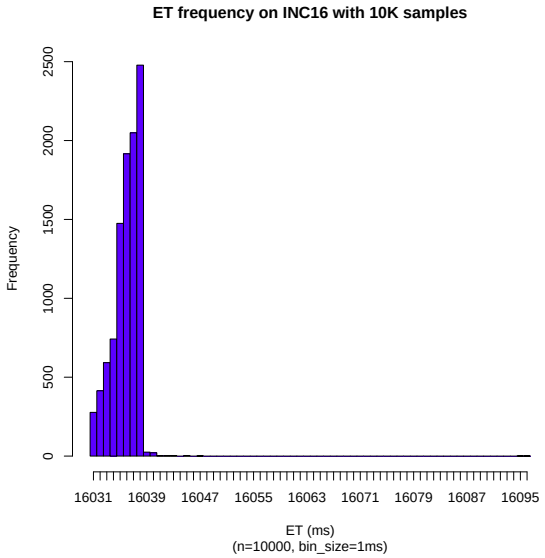
Table 13: Notes on experiment runs used for histograms



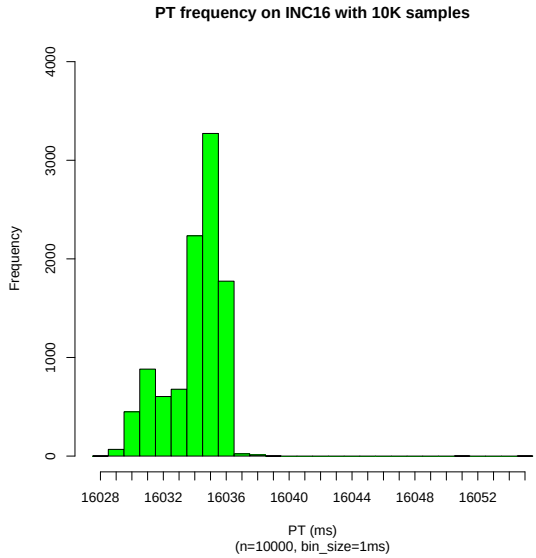
(a) ET frequency on INC8



(b) PT frequency on INC8



(c) ET frequency on INC16



(d) PT frequency on INC16

Figure 37: Histograms of INC8 and INC16 with 10,000 samples

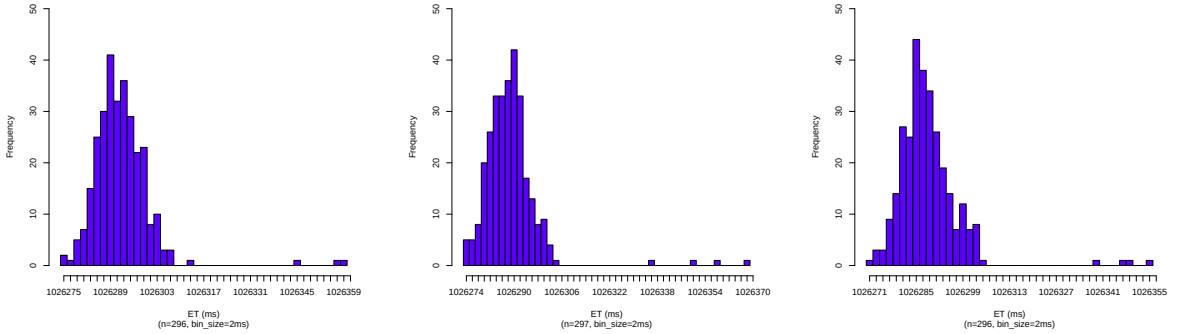
5 Histograms on Consecutive INC1024 Runs

This section exhibits histograms on (three) consecutive runs of INC1024. The detailed description of the base data is from Table 11.

Machine	Task Length (sec)	Description	Experiment Period	Relevant Histograms
`sodb9`	INC1024	300 samples, each	2017-04-12 ∼ 2017-04-23	Figs. 38 and 39

Table 14: Notes on experiment runs used for histograms

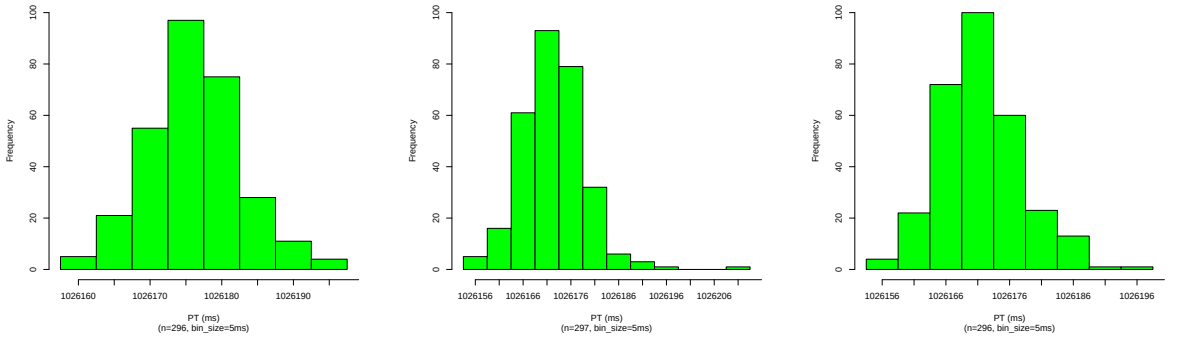
5.1 ET



(a) ET frequency on INC1024-Run1 (b) ET frequency on INC1024-Run2 (c) ET frequency on INC1024-Run3

Figure 38: ET Histograms of Three Consecutive INC1024 Runs

5.2 PT



(a) PT frequency on INC1024-Run1 (b) PT frequency on INC1024-Run2 (c) PT frequency on INC1024-Run3

Figure 39: PT Histograms of Three Consecutive INC1024 Runs
